

A laboratory flask containing a blue liquid sits on a dark grey surface. The background is a blurred laboratory setting. The text 'Introducing Slate grey with grey core' is overlaid on the left side of the image.

Introducing Slate grey with grey core

TRESPA®

Aesthetic innovation meets Trespa® TopLab® Plus — a unique surface for the most demanding lab applications

Introducing VP122 Slate Grey — now with a matching grey core.

Trespa® TopLab® Plus just got more design-forward. The new grey core means edges, cutouts, and fabricated details stay visually seamless — giving designers a cleaner, more cohesive aesthetic without compromising the surface performance labs demand.

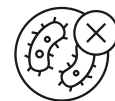

Trespa® TopLab® Plus is manufactured using Trespa's innovative Electron Beam Curing (EBC) technology, delivering a highly scratch-resistant surface that withstands aggressive cleaning protocols and harsh reagents.

For more than 65 years, Trespa has been developing high-performance surface solutions that make it a trusted partner for pharmaceutical, clinical, biotech, forensic, and university laboratories — wherever demanding lab environments require surfaces that deliver outstanding performance.
